Response to Arguments/Allowable Subject Matter

Applicant has argued that the Examiner's rejection of claims 1 and 3-7 over *Nishiumi* in view of *Hara* is invalid because *Hara* is unavailable as a reference and, further, because the rejection is without foundation. Applicant has not elaborated on the second statement apparently believing that the first-presented issue was sufficient to merit withdrawal of the rejection.

The Examiner disagrees that *Hara* is unavailable as a reference under 35 U.S.C. 103(a). While it is appreciated that the effective filing date of July 17, 2002 does not antedate that of Applicant's foreign priority papers, Applicant may not rely on these dates because a certified translation of these documents has not been furnished.

On the other hand, upon reviewing the prior art rejection, it has been concluded that, indeed, the rejection is flawed. The Examiner asserts that, because the compositions taught by *Nishiumi* and *Hara* are so similar, one of ordinary skill would have turned to *Hara* to ascertain what form of calcium carbonate would be appropriate for use in *Nishiumi*. As a general rule, this line of reasoning would be appropriate had the calcium carbonate been included in each of the compositions for a similar purpose. However, *Hara et al.* incorporate calcium carbonate into their additional for the purpose of enhancing heat resistance and electrical insulation. The role of calcium carbonate in *Nishiumi*'s composition, by contrast, is to prevent the loss of adhesive properties under extreme conditions. This may require the use of forms of calcium carbonate other than those recommended by *Hara*. Therefore, the references are not properly combinable to
